**NATURESSE**

# *Naturesse: the importance of a pleasant environment.*

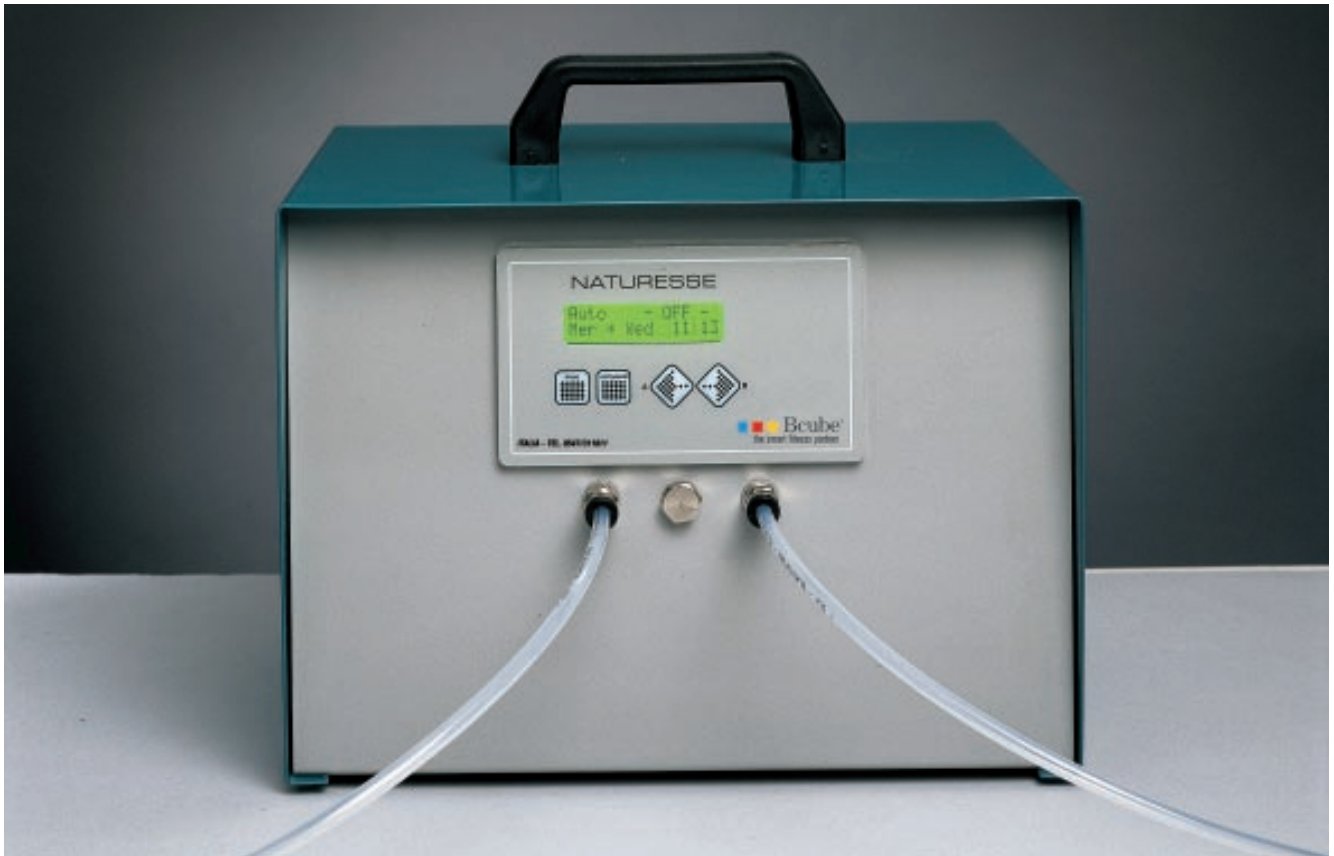

**Is the air you are breathing fresh? Odours always create problems! Bcube® presents the perfect solution with Naturesse, which creates a healthy and pleasant environment by using all-natural products.**

A pleasant environment is the first step towards winning the loyalty of your customers, the key to success for any fitness centre. Here then is the latest Naturesse proposal - a scent distribution system comprising one, or more, compressors which add micro-drops of all-natural scented oils to the air through special diffusers. These diffusers use cold air and not hot air or gas. The multi-scented and always pleasant-smelling oils mask the unpleasant odours in the rooms. Entering a room, the customers will immediately perceive the difference in the quality of air and will regard the centre in a more positive light.

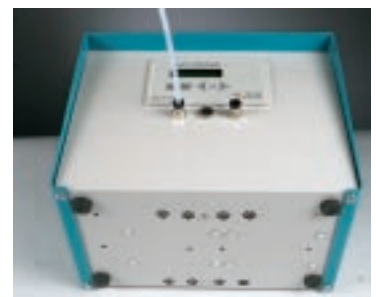

## *Efficient and easy to use.*

**There are no problems with installation, setting and management of Naturesse. Whether you install it in a new or an existing centre you will discover that it answers your needs in the easiest and most effective way possible.**

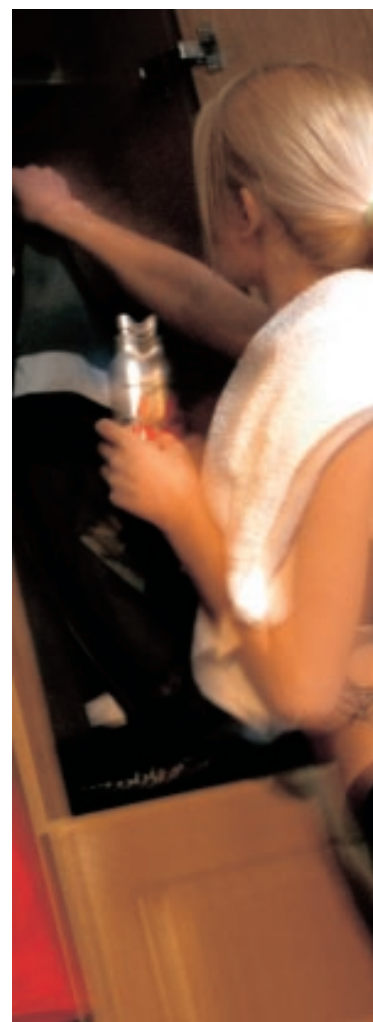

With Naturesse you do not require any special electrical system, so it can be fixed in any technical space (even in a changing room) and connected with a simple 220V socket. It can be operated manually or automatically. In the latter mode, a timer will allow you to set the switch to turn itself on or off, up to 140 times a day, and to repeat the setting for any day of the week. Naturesse is fitted with a pre-set program which may be changed as required. The air cables are safety quick-clutch. The switch is mainly used for the "manual" operation, it is not necessary when using the automatic setting. Finally, this machine is fitted with a handle for re-positioning and feet with rubber bearings.

NATURESSE COMES WITH THE APPROPRIATE MANUAL FOR INSTALLATION, USE AND MAINTENANCE.

# *Creating the perfect atmosphere in every room.*

**Reception, changing-room, aerobics area, indoor cycling area, weight-lifting and cardio-fitness room, sauna and steam bath. Naturesse works for you everywhere, showing your customers how much you value the environment of the centre.**

At the reception: just the right first impression! The people who enter the centre and smell the scented air will recognise and appreciate your attention to detail. In the changing-rooms: nobody will care about the customers who forget their towels or shoes. In the work-out rooms: it will cancel out the unpleasant smell of "men at work", especially when the centre is most crowded. In the sauna and steam bath: at last there is no need to add scents to the washtub or to ladle water over the stove! All this at a very attractive price. A jar of 450 ml scented oils lasts about 45-60 days and enables you to make considerable savings when compared with normal deodorants or the oils commonly used in the sauna or steam bath.

# *Scent dispenser.*

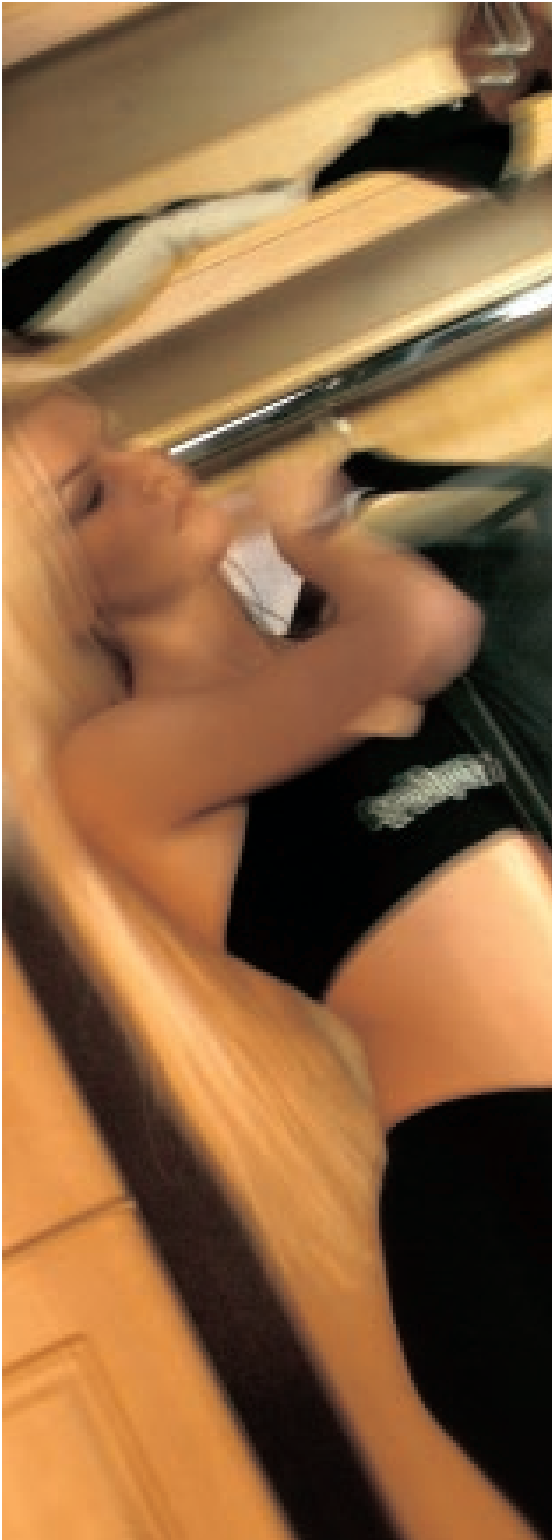

**The scent dispenser is the core of the system. A system of highly accurate valves vaporises natural scents and distributes them uniformly into the air. A high quality design for high quality air.**

Following the clear instructions given in the installation manual, the dispenser should be installed at a height of about 2.5 m and a minimum of 50 cm from the ceiling. Each diffuser is designed to cover a volume of around 120 cubic metres. It is therefore easy to calculate the number of diffusers needed for each room. In order to be able to respond to a variety of customer needs, two types of compressor are available: Model BD 2001 can feed from 2 to 4 diffusers while Model BD 2002 can feed from 6 to 8 diffusers. In general we recommend the use of different compressors to reflect the different requirements in areas such as changing rooms, workout rooms and receptions. This is due to the fact that the range of scents may necessitate different release intervals. The connections between the diffusers are made with transparent hoses and T-shaped joints. The diffuser is closed, but a window on the outside cover makes it possible to view the level of scent. Changing the scent jar is extremely easy and quick.

# The scents: 100% natural.

All the essences used for the scents are 100% natural. All the scents contain Tea Tree Oil, a highly antiseptic essential oil - this is just another innovation by Bcube®, which underlines once more its leading position in the market.

<b>CASSIOPEA</b> 450 ml - eucalyptus + mint	
<b>MIRA</b> 450 ml - mint + eucalyptus drops	
<b>ORION</b> 450 ml - pine + eucalyptus	
<b>LALANDE</b> 450 ml - eucalyptus + pine	
<b>MAJA</b> 450 ml - eucalyptus + Schotch pine	
<b>NAOS</b> 450 ml - orange + lemon	

The scents are supplied in packages containing 6 jars, either all the same or mixed.
